Building Regulations 2010
Part L – Building Regulations Compliance Guide

Fit SESI. Forget scale.

Benefit from whole house protection with SESI

Treating domestic water systems by fitting SESI provides installers with a **profitable new business opportunity** that could also save households up to £100* a year on increased energy bills. The unit simply fits in-line **on the incoming water-main**, is non-magnetic, requires no chemicals, is non-polluting, totally maintenance free and has a **5 year guarantee**.

Fitting SESI means that you also **comply with WRAS recommendations** and **meet the requirements of PART L** – the importance of controlling the build up of limescale.
