

PLAYING OUR PART IN A SUSTAINABLE FUTURE

SUSTAINABILITY POLICY

SENTINEL
Water & Energy Solutions

SUSTAINING THE ENVIRONMENT. ITS OUR POLICY.

As the UK's leading water treatment specialist, Sentinel provides a comprehensive range of products for cleaning, protection and noise reduction in domestic water heating systems.

Recognising the vital role we can play in reducing the environmental impact of the heating industry, Sentinel has developed a sustainability policy aimed at ensuring that we act at all times as a responsible business within society.

Our objective is to integrate environmental and social aspects into our standard business practices, aligned with our traditional values of openness and inclusivity.

Our policy in action.

- We are committed to continual environmental and social improvement. In our local and global operations, we strive to prevent pollution and reduce any adverse effects on the environment and society.
- As part of our vision for a sustainable business, our Research & Development facility is continually striving towards wholly environmentally acceptable formulations and packaging. For example, our bottles now incorporate a significant percentage of recycled plastics and we are progressively increasing this proportion.
- Our products are manufactured under ISO 14001 and ISO 9001 standards, and strictly comply with all relevant legislation, regulation, standards and codes of practice. Where appropriate, we seek to reduce, reuse and recycle materials and resources.
- We have systems in place to protect the health and safety of all individuals who may be affected by our activities. As employees and employers, we look to make further individual contributions to sustainability through charitable donations and funding of green organisations. Our company car policy is to provide only diesel-engine cars to encourage minimal impact from our car fleet. The scheme is designed to incentivise cars with emissions of less than 165g CO₂/Km or less.

- We have streamlined our supply and distribution chain to promote the adoption of best practice in management, procurement and specification, and provide appropriate training to our staff, suppliers and Customers to ensure the effective delivery of our sustainability objectives. This will involve working with boiler manufacturers, merchants and SHLs on a number of different projects.
- Sentinel is focusing on reducing the environmental impact of our bottles and reducing the impact and cost of transport by producing a more concentrated product which will result in less waste and less weight to transport.
- We communicate our sustainability policy to staff and stakeholders via the Sentinel website.

FLUSHING WITH SENTINEL PROMOTES CENTRAL HEATING EFFICIENCY AND PROTECTS THE ENVIRONMENT.

Independently confirmed by GASTEC.

On behalf of Sentinel, GASTEC, the largest heating research body, has carried out the first-ever independent research programme into the benefits of chemical water treatments for domestic heating systems.

GASTEC concluded that Sentinel chemical water treatments offer a very inexpensive way of bringing systems up to a better standard of operation, whilst reducing fuel bills and cutting carbon dioxide emissions.

The Clear Benefits:

- With brand new boilers, operating clean systems can make that important 2-3% efficiency difference that makes them ultra efficient.
- This also further reduces fuel bills and makes an even greater contribution to lowering emissions.
- Changing a boiler without prior cleaning did not result in any efficiency improvement.
